

LAKEVIEW TERRACE: QUICK-BUILD NEIGHBORHOOD GREENWAY

SAFER PLACES TO WALK, BIKE, AND DRIVE.

BURLINGTON RESIDENTS told us we need a low-stress north/south route for people of all ages to walk and bike across Burlington.

NEIGHBORHOOD GREENWAYS are a new project that will make it safer and easier to walk, bike, and manage stormwater in neighborhoods that connect community destinations.

Pavement markings and signage guide people on the route. Traffic calming features encourage people driving to maintain the slow appropriate speeds for quiet, residential streets - or use other roadways to pass through.

QUICK-BUILD projects use paint and adjustable materials to rapidly test street safety in real time.

WHAT WILL BE INCLUDED?

Curb extensions are gateway treatments that encourage slow driving. Green backed shared lane markings guide people bicycling. Traffic circles and neckdowns will maintain slow driving. Materials will include paint, low flexible bollards, large planters, and more - we'll keep improving as we hear your input!

HOW LONG WILL THE PROJECT BE IN PLACE?

If it is a success, it will be refined and kept in place until capital dollars can make it more permanent (typically 1-5 years).

WHAT'S NEXT?

Installation will begin this fall. More materials will be added in spring 2018. Share your ideas and concerns, sign up for email updates, and we'll bring updates as the project progresses!

The Burlington Quick-Build program is an initiative of the City of Burlington Department of Public Works to deliver a phased approach to bicycle and pedestrian infrastructure projects that improve safety and connectivity. These are built quickly, with versatile materials, so that residents, businesses, and visitors can experience them immediately, provide feedback, and collaborate to make changes before construction.

Have new ideas, questions, or concerns? We want to hear from you!
